

giroflex 64

SERIOUS SEATING

G64

In 1919, Giroflex created the world's first swivel office chair. In 1928, Giroflex designed the world's first sprung swivel office chair. Giroflex has built an international reputation for developing unparalleled, innovative seating solutions. Whilst other manufacturers have attempted to diversify, we have focused on retaining our position as one of the world's leading designers and manufacturers of office seating.

OUTSTANDING ENGINEERING

Facilities managers today examine performance and cost over the product's lifecycle. With Giroflex 64 precision engineering ensures durability, detachable cushions create longevity and the fact that 98% of the parts are recyclable ensures environmental concerns can be addressed. In short, the Giroflex 64 range offers unrivalled performance with a fresh aesthetic.

G64 FAMILY

The chair of choice for

No two workplaces are the same. From call centres where operators rarely leave their workstations to executives and secretaries who are always on the move, the demands placed on each chair can vary enormously. To reflect the wide range of uses, working environments and users, every aspect of the Giroflex 64 family of chairs is designed to be fit for purpose.

corporate clients around the world

The world's most cost effective

There is nothing else in an office environment that will have a greater impact on comfort, health and productivity than an office chair.

The choice is therefore an important one.

As you would expect standard features, many pioneered by Giroflex, can be taken as read:

- Gas height adjustment
- 5 star aluminum base
- Back height adjustment
- Seat depth adjustment
- Synchronous mechanism

Giroflex, the seating specialist, is continuing to push back the boundaries and challenge conventional ways of thinking and working. For Giroflex, ergonomics is not a fashion nor a mere advertising slogan, it is the starting point of all product development.

Setting New Standards

Users will find Giroflex 64 easy to adjust

An office chair that incorporates many features is wasted if the user is unable to easily adjust the settings to obtain the best performance for their weight and dimensions. Many chairs feature a vast array of buttons and handles often hidden beyond sight and out of convenient reach so whilst the potential for functionality may exist it is cloaked and rarely benefited from by the user. Giroflex believes that the adjustment of an office chair should be intuitive. As the users arms fall loosely to their sides so their hands come into contact with the levers needed to adjust the chair.

Most importantly the tension adjustment is centrally located at the front of the seat and is also altered comfortably from a seated position. The inclusion of simple clear graphics on each user interface further enhances the intuitive adjustment of the chair.

Giroflex 64 encourages a healthier posture

Commissioned research has resulted in the development of a 'dual-zone' seat surface incorporate a downward slope.

The unique Giroflex 64 seat incorporate the benefits of forward tilt whilst avoiding its negative features. The rear section of the seat cradles the pelvis, providing the necessary support in the upright and reclining positions and prevents the user slipping forward; the front with its edge sloping downwards at an optimum angle of 7° ensures freedom of movement for the legs - preventing pressure on the thighs and increasing blood circulation. This is a convincing alternative to the towards forward tilting seats.

productivity tool

Unique Giroflex DualZone seat profile

Giroflex 64 'fits' a greater proportion of the population

Many office chairs are designed for an 'average' person - but who is average? Given the bewildering range of shapes and sizes of the adult working population is it possible to have one chair range to fit all? Giroflex 64 certainly goes further to make this possible with seat depth adjustment function as standard and a choice of seat sizes.

FIRA Ergonomic Excellence Award

Giroflex 64 will keep you on the move

The exceptional comfort and freedom of movement of the Giroflex 64 range results from anatomically shaped seat and back contours as well as a unique tensioning system within the mechanism.

Progressive resistance to support increasing body weight as you recline ensures the feeling of floating in the chair is maintained. Crucially, the correct balance of the chair can be achieved quickly from the seated position thanks to the accessible location of the tension knob.

G64

arm
height

You'll find G64 in offices, boardrooms, showrooms and reception areas around the world. Each has a different workload and task to perform and offers numerous options to suit every working environment and the individuals within them. Whatever the function or location, Giroflex 64 can improve productivity through improved comfort and movement.

The average office worker spends 7 hours a day sitting at their workstation. The importance of the correct selection of an office chair cannot be over-emphasised since it is the only item of furniture that supports all of the body, every working day.

AS A RENOWNED PREMIUM BRAND Giroflex is synonymous with Swiss quality standards. So you can safely demand the highest level of comfort and performance.>>
